Most Residential Real-Time Pricing Participants Saved in 2007!

The results are in – The majority of customers who participated in the ComEd Residential Real-Time Pricing (R RTP) program for all twelve months in 2007 experienced an annual savings between 7 to 12 percent compared with what you would have paid with ComEd's basic flat-rate service.

While there is no guarantee that participants will save money in the ComEd R RTP Program, about 95 percent of the 3,300 participants who actively participated last year paid less than customers on ComEd's basic flat-rate service!

You will receive your individual savings summary later this month, complete with a month-by-month breakdown of your electricity usage and costs, and your savings compared with the basic flat-rate service. Watch your e-mail box for this important update.

By controlling and shifting your use of electricity, you've helped reduce demand when it counts most. When less electricity is generated, it helps to lower carbon emissions that cause global warming. Working together, we can make the best use of our energy resources and ensure a safe, reliable electric supply for Illinois. Congratulations on a job well done!

Winter Energy-Saving Tips

The following tips can help you manage your energy use and bills.

Light for less

Save on lighting by switching from incandescent to compact fluorescent bulbs.

Plug power leaks

Many electronic devices use energy even when they are turned off. Common culprits include home entertainment systems, office electronics, and appliances that include rechargeable batteries. Look for appliances that can be unplugged or connected to a surge protector, which can be easily switched off when the appliances are not needed.

Clean up on washing

Take advantage of lower hourly electricity prices to run major appliances such as your clothes washer and dryer and your dishwasher. During the winter, electricity prices tend to be low most of the time, but prices are typically lowest at night and on weekends.

Shop for savings

Keep energy efficiency in mind when shopping for light bulbs, appliances, and electronics. Look for products that have earned the ENERGY STAR® label. They meet strict energy efficiency guidelines, while offering high levels of performance and quality.

Sincerely,
Katie Papadimitriu
